

Want Increased Process Efficiency?

Introducing MIST's new innovative alternative to antibiotics!

www.MistChem.com
847-912-8384

The Delasan CMT program, a patent pending process, is a peroxyacetic acid-based additive that works as an **alternative to antibiotics** to safely reduce the incidence of lactic and acetic acid normally formed in the fermentation process.

***Visit us at FEW booth 2035,
set up a free on-site process
evaluation, and learn how
our plant-specific solutions
can help improve yields—
and your bottom line.***

Product features:

- **Increases ethanol production**
- **Safe, proven, antimicrobial technology**
- **GRAS and FDA approved**
- **Broad spectrum control of organic acids, safe for yeast at recommended use levels**

Mist, the CIP experts in the ethanol process, will positively impact your bottom line. To schedule an on-site consultation for the Delasan CMT program and CIP optimization, email Steve at Steve@MistChem.com.
